- **Xchange Solution Suite**
- **Broking Solution Suite**

Xmatch is a powerful set of Solutions which facilitates and manages operations necessary for an Exchange. It has an order management system, Risk management (Margin, Span Margin, MTM Monitoring), Open Interest monitoring, Price – Time priority based matching, Efficient broadcast streaming, API interface for 3rd party order routing solutions and Report Management .

Xact is a Browser based Clearing and Settlement System and a Complete Back office Solution for exchanges. It is an intelligent solution for all the back-office operations related needs of exchanges. It also has an integrated solution, which provides capability to handle multiple markets, market segments in a single user interface.

Xview is a browser based Online Surveillance System which is powerful, flexible and configurable system suitable for exchanges. The system comprises of online & offline Monitoring Risk Management at Member level.

Xtrade is a powerful Order routing system (CTCL) trading solution which allows the user to watch market prices and execute orders instantaneously by Real Time Price streaming. It has a Built-in comprehensive and flexible risk management system (at client, dealer, branch level). Orders can be placed by dealers (CTCL).

Xbos The Back office is almost the most vital aspect of the broker's operations. While trade is the backbone of his business, it is the back office that keeps track of the relationship and delivers the accounting and settlement that completes the deals.

It offers complete functionality for mid and back office operations and integrates seamlessly with your existing other application for external data interface and continues to work towards providing end to end scalable solutions to all the concerned areas.

It is multi exchange and multi segment solution designed to deliver excellent value to small or large size brokerage house dealing with retails as well as institutional clients.
